

Cyto-Ess™

Immune Response
Modifier

What is Cyto-Ess™?

- A refined bovine lacteal complex milk fraction (<100 kD).
- Comprised of molecules essential to building new cells and sustaining immune system performance.

Why is Cyto-Ess™ important?

- The decline in public health is directly related to compromised immune function.
- Stress, poor diet, infection, toxins and trauma reduce molecules present in the body that are essential for new cell building and sustained immune function.
- Supplementation with Cyto-Ess™ is the most viable strategy to offset these effects.
- No other supplement provides detectable quantities of the critical small molecules necessary.

Has Cyto-Ess™ been studied?

- Studies demonstrate its effectiveness:
 - As an Immune Modulator,
 - In elevating NK cell count and activity,
 - In activating T & B cells.
- Studies identify its “Mechanism of Action”.
- Over 600 scientific references.
- Publication in leading journals, books and information articles.
- Favorably compared to other immune supporting supplements.

Cyto-Ess™ is safe.

- A GRAS (Generally Recognized As Safe) substance.
- Over 120,000,000 servings have been safely consumed.

How is Cyto-Ess™ made?

- Produced at a private facility.
- Privately managed dairy cows.
- Application of a patented process generally called “infusion” that massively elevates the quantity and nature of <100 kD molecules available in milk.
